Page 2

Q1 Can you tolerate a 5% reduction in your water supply from GCWA?

Yes

Q2 What is the minimum warning time you require to be able to tolerate a 5% reduction?

Other (please specify):

1 week would be enough notice; small reductions would cause us to reduce operating rates or we could choose to completely shutdown one facility in favor of others that are more profitable at the time.

Q3 Can you tolerate a 10% reduction in your water supply from GCWA?

Yes

Q4 What is the minimum warning time you require to be able to tolerate a 10% reduction?

Other (please specify):

1 week again; the impact would be the same as mentioned before; same comments as before

Q5 Can you tolerate a 20% reduction in your water supply from GCWA?

No

Q6 What is the minimum warning time you require to be able to tolerate a 20% reduction?

Other (please

specify):

more time would be needed so my answer would be 3 weeks, but I wanted to provide more information. It is possible at a 20% reduction that we could not operate at all.

Q7 What is the maximum amount that your water supply can be reduced and still allow your operations to continue?

Other (please specify

%):

I don't know for sure. Technically, a 30% reduction in my contractual amount will not impact my Site because I have 25-30% excess supply. If you are talking about the maximum reduction on our take, I don't know that answer. I would have to do some work to get that information.

Q8 Are you willing to participate in an Industrial Water Reuse Task Force to explore options for GCWA customers to pool their effluent for reuse?
